Fake Review Detection in 2023: Overview, Methods & Case Studies

Watch how fake reviews on Google can affect local businesses.

It is the most basic way of detecting fake reviews, and annotators manually decide whether a review is fake. Although it can be a promising approach, research shows that humans have 57% accuracy in a fake review detection task. Plotkina, D., Munzel, A., & Pallud, J. (2020). "Illusions of truth-Experimental insights into human and algorithmic detections of fake online reviews." Journal of Business Research, 109, 511-523. Retrieved January 17, 2023. Besides, as there is an exponential increase in online reviews, it requires a great workforce and time.

Excessive punctuation use

Researchers used the Apple App Store dataset containing 22+ million reviews from

1.4 million apps to detect fake reviews. Results show that 66 million (35% of) Tj T* BT /F

Evaluate the motives behind online posts and learn to distinguish false content from real information.

Because social media is a public platform, anyone-including news outlets-can post anything without being accountable for fact-checking. It's left to users to distinguish misinformation vs. disinformation in their feeds.

Disinformation

There are a variety of reasons that individuals' social media accounts or even business accounts might spread disinformation. It could be to increase their social media marketing effectiveness, boost their online traffic, build more fol
